## Research in Medical Imaging Using Image Processing Techniques

The book is designed for end users in the field of digital imaging, who wish to update their skills and understanding with the latest techniques in image analysis. The book emphasizes the conceptual framework of image analysis and the effective use of image processing tools. It uses applications in a variety of fields to demonstrate and consolidate both specific and

A widely used, classroom-tested text, *Applied Medical Image Processing: A Basic Course* delivers an ideal introduction to image processing in medicine, emphasizing the clinical relevance and special requirements of the field. Avoiding excessive mathematical formalisms, the book presents key principles by implementing algorithms from scratch and using simple MATLAB® /Octave scripts with image data and illustrations on an accompanying CD-ROM or companion website.

## A Survey on Feature Selection Techniques in Medical Image ...

Image processing is a technique which is used to derive information from the images. Segmentation is a section of image processing for the separation or segregation of information from the required target region of the image. There are different techniques used for segmentation of pixels of interest from the image.

The well known image processing technique named pre-processing was implemented for enhancing the quality of the image. The raw MRI consists of irrelevant items which reduces the overall accuracy. Two dimensional images are represented with digital image containing finite set of picture elements commonly known to be pixels.
